Content

Evans Group today announced a brand refresh that unites four trusted, U.S.-based capacitor manufacturers, Evans, Paktron, UTC, and Eulex, under one market-facing identity: Evans Group. Formerly known as Quantic Evans, Quantic Paktron, Quantic UTC, and Quantic Eulex, the businesses will continue to deliver the same proven products and engineering support customers rely on, now through a streamlined brand experience and a single online destination: [evans-group.com](https://www.evans-group.com).

A Unified Portfolio of Specialized Technologies

Evans Group provides power-dense, high-reliability solutions engineered for mission critical environments across defense, aerospace, energy, and advanced RF systems.

- **Evans:** Hybrid wet tantalum capacitors delivering industry-leading power density and ultra-low ESR performance for SWaP-constrained systems, routinely qualified and tested to NASA-INST-002.
- **Paktron:** Stacked multilayer polymer (MLP) film technology engineered to deliver more robust mechanical and electrical performance than conventional wound film, higher-frequency capability with low ESR/ESL, and high dV/dT in a lightweight, self-healing architecture.
- **UTC:** High-reliability, U.S.-made MLCC solutions backed by rigorous screening/testing and qualification-driven manufacturing in a MIL-STD-790 approved facility. Product offerings include MegaCap BC Series, SMPS, discoidal and planar arrays, and pulse energy capacitors to 250°C for missile systems, initiator modules, and detonation systems.
- **Eulex:** Advanced RF ceramic capacitors with an innovative embedded-electrode architecture that delivers an order-of-magnitude increase in capacitance density with ultra-low parasitics resulting in broadband, ultra-low-loss, high-power performance from DC-110 GHz.

“Our customers and partners have always counted on the deep technical expertise and reliability behind these brands,” said Colin McClennan, Vice President, Evans Group. “By bringing Evans, Paktron, UTC, and Eulex together as Evans Group, we’re making it easier to access the full breadth of our specialized capacitor technologies, while maintaining the same teams, the same manufacturing footprint, and the same commitment to quality and service.”

No Changes to Products, Quality, or Operations

Evans Group emphasizes that this brand refresh is designed to be seamless for customers and partners. There will be no impact on product quality, delivery schedules, service levels, or technical

support.

- No changes to physical devices or product offerings, and no change to form, fit, or function.
- No changes to manufacturing locations or shipping logistics.
- No changes to shipping and billing addresses, tax identification, or invoicing information.

“Our commitment to customers and partners remains our highest priority,” added McClennan. “This refresh simplifies how we go to market. Everything operational stays the same, and customers can expect the same quality, delivery, and service they have always received.”

Heading : About Evans Group

Evans Group unites four trusted capacitor brands - Evans, Paktron, UTC and Eulex - under one specialized portfolio of high-reliability capacitor solutions. Serving defense, aerospace, energy, industrial and advanced RF applications, the group delivers power-dense capacitor technologies engineered for mission-critical systems where performance, reliability and long operating life are essential.
